All 135 bird species recorded for Warner Park from 2008 thru 2013 including rare (< 9 records/year) and casual (1 record/1-5 years), but not accidental (< 1 record/5 years).

When you see a new bird or find a nest, record time, date, exact location and a brief description. Take a photo or record the song. Email findings to pokane@wisc.edu. A researcher will verify your report. Verified sightings will be added to survey and posted on Wild Warner's website.

This list of 135 species is the result of a 500-hour participatory research project led by Environmental Studies PhD candidate Trish O'Kane, UW-Madison and supervised by Dr. Anna Pidgeon, UW-Madison Wildlife Ecology. Wild Warner, Madison-Audubon, UW-Madison and Sherman Middle School students, and neighbors helped compile data.

For more information on Warner's wildlife and a calendar of guided nature walks go to:
